

Cleaning for Holding Tanks

START WITH A CLEAN TANK: Here is How!!!

1. Fill tank with clean water. Add ½ cup of *Baking Soda* to **1** gallon of warm tap water and mix well. Pour down toilet and flush or you can pour down pump out port. Rock boat to agitate tank. Pump out until water runs clean. If boat wasn't pumped out before storage and walls are discolored, fill tank with water to cover dark area in tank and use 1 gallon of *BacTANK T3 HOLDING TANK EXTRA CLEAN*. Let sit in tank as long as possible (preferably two weeks; the longer the better) while you do other maintenance on your boat. Odor will be produced from this; odor is produced from cake build up. **If you have two tanks, clean one at a time and use the one not being treated.**
2. Now that your tank is clean it is ready for use. Flush once to put clean water down the head. Add 6-8oz of *BacTANK T3 HOLDING TANK TREATMENT* and flush.
3. Depending on number of guests and heavy use on weekends, throw a 2 oz. *BacTANK T3 DRY POWDER SOLUABLE PACKET* down toilet occasionally.
4. You should **not** have your TANK pumped every weekend, unless it is getting full.
5. This is a microbial product that reproduces at a high rate if there is food for the bacteria to eat and convert the waste into a liquid to be easily pumped and reduce odor.

BacTANK T3 SAFE SCRUB is the only product to be used to clean the toilet.

DO NOT USE: Vinegar, Clorox, Simple Green, Toilet Fresheners, or any other Harsh Chemicals down the toilet.

ALL OF OUR MICROBIAL PRODUCTS ARE BLENDED AGAINST EACH OTHER.

(This means you will have the same quality product each time you open a new bottle.)

If you feel that you are still having a problem with odor, call 1-770-307 0044 and we will work hard to solve your odor issue.
